

AUTONOMOUS

WASHDOWN UNITS

TBS Mining's unique compact high pressure washdown units, originally developed for a major mining company, now fitted to the clients' entire fleet, removes the requirement for any existing main diesel engine-powered systems.

TBS Mining's washer enables the drill to be cleaned while the main engine is shut down and isolated, improving personnel safety whilst allowing housekeeping to continue for maintenance.

The units are easily retrofitted and available for Epiroc Pit-Vipers and Sandvik / Cubex drills. TBS Mining can also design & engineer to suit other makes and models where required.
